Maximise your Production Operating Time

We at Techenomics really value our customers and are constantly striving to provide the best service and solution to any problem. Our objective is to ensure the best possible pumping speed and efficiency to minimize equipment downtime and maximize your production time.

It is with this in mind last month we acquired a new six tonne Isuzu truck to provide lubricating services in the Hunter Valley, NSW. An On Spec Services truck could be used in many other areas of the mining industry.

Our OnSpec Services truck pumps its range of ONSPEC lubricants 24/7 directly onto equipment in the pits. The truck is flexible and has the capacity to access most areas on mine sites on a daily basis, during both normal and extreme weather conditions. It can quickly and accurately dispense lubricants and avoid the contamination issues normally faced.

---	--

To modify the truck to ensure it operated perfectly, engineers modified the tray to fit a 550kg mine grease storage tank, and a 1000kg storage tank for open gear lube grease with air driven pumps powered by the vehicle.

Our OnSpec Services truck has been a successful tool for many clients in the Hunter Valley region, been used at Brambles for bulk filling of grease tanks at Glennies Creek mine and at Mount Arthur Coal, and will continue to provide lubricating services for many years to come.

Darrin Garland, OIC, Techenomics based at the Mt. Arthur site.

We are the experts, so please contact Darrin Garland to solve all your lubricant pumping issues:
